Flexible Solutions For Your Well-Site Needs

The Pioneer Advantage

- Professional And Responsive Service Backed By Strong Local Expertise
- New Fleet Of High Technology Open Hole And Cased Hole Wireline Units With An Average Age Of 3.6 Years
- Geographic Footprint In All Key Natural Gas And Oil Basins
- Outstanding Safety Record

Geographic Diversity With Local Expertise

We strongly believe that knowledge of local basins is critical to quality and efficiency of customer service.

This belief was a core of our growth strategy and continues to be the basis of how we conduct business. Today our geographic footprint extends through all major natural gas and oil producing regions of the United States and we continue to bring the same level local expertise to your wellsite as when we first started.

Safety

Safety of our people and customers is a number one priority. We have one of the best safety records in the industry and continuously provide safety trainings to our employees. We also participate in many of our customers' safety programs.

Service Commitment

To maximize your asset's potential you need reliable and timely data to make right operating decisions. And this requires both processes and people.

Our commitment is to provide you with the most efficient and responsive service, effective logging data, and expertise in data interpretation to help you reach the asset performance you desire. We do everything possible to ensure operational excellence including providing your asset team with real time information and efficient teamwork. Our logging units are equipped with two sets of tools so we can be the most efficient and productive at your wellsite.

Logging Unit Fleet

We operate a fleet of some of the newest land and off-shore logging units in the United States. Our open-hole logging units are equipped to transmit data via satellite from a wellsite in order to provide you with real time information.

Our **FastMast** units have a built-in mast which enables us to perform open and cased hole logging where a drilling or workover rig is not available.

We operate off-shore skid-mounted wireline units off the shore of Louisiana. These units offer flexible down-hole services, data acquisition safety, and quality performance.

Open Hole Services

- Formation Analysis
- Resistivity
- Porosity
- Acoustic
- Temperature

Cased Hole Services

- Logging
- Pipe Recovery
- Stuck Pipe Logging
- Mechanical Services
- Perforating
- Tubing Conveyed Perforating (TCP)

Geographic Diversity
With Local Expertise

Unsurpassed Service By The Best People In Business

With the most experienced personnel, we provide high-quality and reliable services and quick reaction to your needs on short notice.

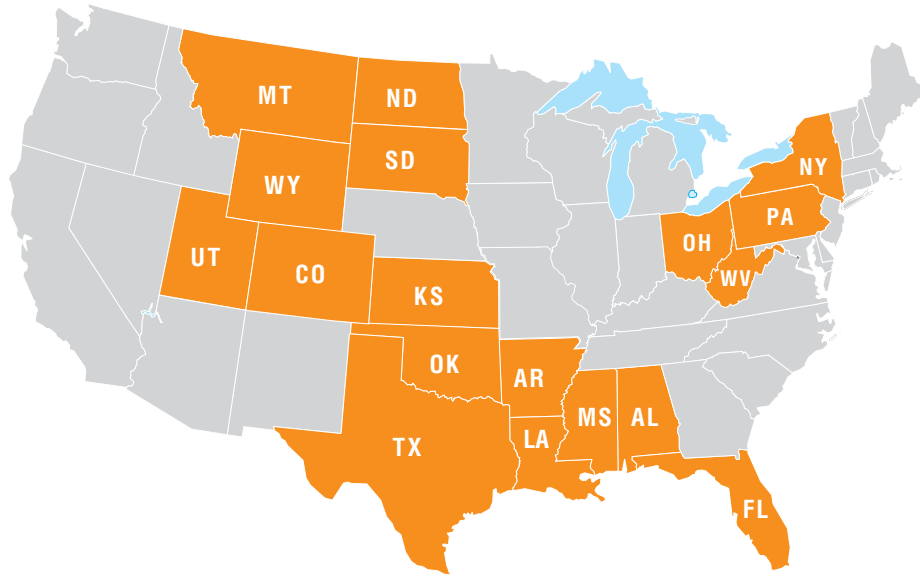

We offer radial and standard cement bond logging with gamma-ray-neutron, pulse neutron, casing calipers, temperature logging, pipe recovery, bridge plugs and a full range of perforating including tubing conveyed and pumped down perforating. Our services include best-in-class horizontal pump down/plug & shoot work. We also offer advanced capabilities in downhole data collection, with fully digital open-hole and slim-hole logging backed by superior engineers. Our extensive inventory of wireline tools includes the latest technology pulse neutron tools.
